

Palisade Gate

Traditional + Ultra

Industrial strength security gate.

Benefits of using Palisade Gates

Palisade gates provide a strong and reliable solution for securing site entrances. Built from durable steel, they offer excellent resistance against intrusion, harsh weather, and daily wear. With custom sizing options, they can be tailored to fit a wide range of access points, while their design acts as a clear visual deterrent to trespassers. Low maintenance and compatible with modern access control systems, palisade gates deliver long-term protection and professional site security.

- ✓ High-impact resistant
- ✓ Access control ready
- ✓ Weatherproof
- ✓ Low maintenance
- ✓ Cost-effective
- ✓ Intruder deterrent

Maximum Security for Your Site

Palisade gates are designed to provide a strong and highly visible barrier, making them an effective deterrent against unwanted access. Built from heavy-duty steel, they deliver a level of strength and durability that is trusted across industrial, commercial, and public sites. By combining a secure structure with a professional appearance, these gates not only protect valuable assets but also create a clear boundary that enhances the overall safety of the premises. With their robust construction and proven performance, palisade gates ensure long-lasting perimeter security and peace of mind.

Palisade Gate

Traditional + Ultra

Industrial strength security gate.

Enhanced Perimeter Security

Palisade gates are designed to deliver dependable protection for sites that demand a high level of security. Constructed from heavy-duty steel, they feature robust vertical pales and a reinforced framework that creates a formidable barrier against intrusion. The design incorporates pointed pale tops, which act as an effective deterrent by making climbing or forced entry extremely difficult.

Strong Deterrent Effect

The design of palisade gates provides more than just physical security – it creates a powerful psychological barrier. Their tall, anti-climb structure, combined with pointed pale tops, sends a clear message to potential intruders that access will be extremely difficult and high-risk. This visible presence often prevents attempts before they happen, reducing the likelihood of trespassing or vandalism. By combining an intimidating appearance with proven strength, palisade gates act as both a first line of defence and a highly effective crime deterrent, making them a preferred choice for securing high-value or sensitive sites.

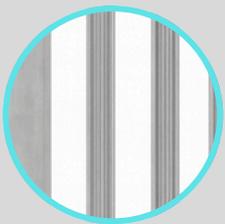

Built for All Environments

Palisade gates are engineered to perform reliably in a wide range of outdoor conditions, making them suitable for almost any site. Manufactured from galvanised steel as standard, they are resistant to rust, corrosion, and general wear caused by exposure to the elements. For added protection and a professional finish, powder coating is available in a variety of colours to match site branding or enhance visibility. This durable construction ensures the gates remain strong and effective year after year, even in demanding environments such as industrial estates, coastal areas, or high-traffic locations. With minimal maintenance required, palisade gates provide consistent security performance whatever the weather.

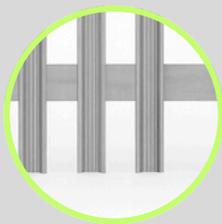

All items undergo thorough multi-stage inspections to ensure they meet these standards, supporting our 10-year product guarantee.

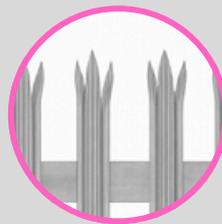

Heavy-duty steel frame

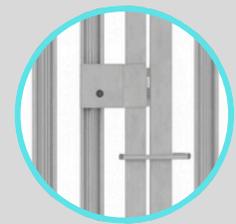

Wide site use

Anti-climb design

Reinforced hinge system

Material: Hot Dip Galv

Post Types: Dig-In & Bolt Down
